DS

Internship Domain
Data Science Master

8

Duration
8 Weeks

EduSkills, AICTE & Siemens

The internship is delivered through the AICTE–EduSkills Virtual Internship Program, with the Siemens Data Science Master domain supported by a structured RapidMiner learning ecosystem.

AI

AICTE Patronage

The program operates under the AICTE–EduSkills Virtual Internship framework and the National Internship Portal.

ED

EduSkills

Provides the virtual internship structure, learning journey and assessments.

RM

RapidMiner Academy

Provides the Data Science Professional and Master learning paths used for the technical curriculum.

Industry Support **Siemens**

Bridging Theory and End-to-End Data Science

Academic coursework often teaches machine learning concepts independently. An end-to-end understanding also requires structured exposure to data engineering, preparation, validation, deployment, monitoring and platform operations.

The internship addressed this gap through a structured RapidMiner-based learning pathway.

What the Internship Set Out to Achieve

DS

Data Science Foundations

Understand Data Science, AI and Machine Learning concepts.

UC

Use-Case Mapping

Identify business problems suitable for AI/ML and understand CRISP-DM.

DE

Data Engineering

Access, load, transform, join, aggregate and prepare data in RapidMiner.

ML

Machine Learning

Understand supervised and unsupervised learning and model validation.

AD

Advanced Techniques

Develop skills in feature engineering, scripting, time-series, model selection and optimization.

OP

Deployment & AI Hub

Understand deployment, monitoring, management and RapidMiner AI Hub administration.

The Toolkit Behind the Internship

RM

RapidMiner Studio

Data Science platform and process design

DE

Data Engineering

Loading, ETL, transformations, joins, aggregation

ML

Machine Learning

Classification, regression, clustering, neural nets, k-NN

VA

Validation & Scoring

Model validation, scoring, selection and optimization

FE

Feature Engineering

Attribute generation/selection and advanced features

AD

Advanced Data Handling

Loops, branches, variables, error handling and scripting

OP

Deployment & Operations

Model deployment, monitoring, model management, web apps

AH

AI Hub Administration

Security, scalability, scheduling, users, licenses

From Business Problem to Platform Operations

1

Business Layer

2

Data Layer

3

Preparation Layer

4

Model Layer

5

Validation Layer

6

Deployment Layer

7

Platform Layer

8

Assessment Layer

The 8-Week Learning Journey

1

Applications & Use Cases Professional

Business problems, CRISP-DM, analytics and validation.

2

Data Engineering Professional

Data access, ETL, joins, aggregation and transformations.

3

Machine Learning Professional

Classification, regression, clustering, validation and Auto Model.

4

Data Preparation Master

Advanced preparation, cleansing, scripting and automation.

5

Machine Learning Master

Advanced models, time series, feature engineering and optimization.

6

Applications & Use Cases Master

Deployment, monitoring, model management and web applications.

7

Platform Administration Master

AI Hub configuration, security, scalability and scheduling.

8

Platform Administration Master

Enterprise platform operations, configuration and administration.

Final • Final Credential Validation / Internship Grade Point Assessment

CERTIFICATION

Successfully Completed

Grade

O – Outstanding

Certificate ID

4416935e55146b2e7ece

Student ID

STU6986f3c62cb241770451910

Duration

8 Weeks | June – August 2026

Skills & Capabilities Gained

- Ability to explain Data Science, AI and ML concepts and map business problems to suitable approaches.
- Practical understanding of data engineering and data preparation workflows using RapidMiner.
- Understanding of supervised and unsupervised learning, model validation, scoring and evaluation.
- Exposure to advanced feature engineering, scripting, time-series handling, model selection and optimization.
- Understanding of deployment, monitoring and model-management considerations.
- Foundational understanding of RapidMiner AI Hub administration and enterprise operations.
- Completed the internship requirements and final credential validation with an “Outstanding” grade.

Thank You
